

Making and sharing: honest and loving connections, experiences, reality and collaborations to build an inclusive community

2 minutes to share what you're up to

I will use the existing Miro cloud-based application to create a social and honest student and staff space. I will experiment with encouraging students to use the BeReal app to chart their honest experiences and experiences on the course. Due to the app asking users to post at the same time (this time can vary day-to-day), students would be able to see each-other's experience more personally and work well as a group, rather than the potentially performative interactions on Microsoft Teams, where students may talk over one another.

The Pre-Degree Online course consists of an international cohort all living in different time-zones. Some are home students, but the cohort covers all continents. They engage in an intense course which running 4 days a week, using Miro as their main platform for work and progress development. I have conducted testing of Miro in preparation for the creation of this artefact

The artefact space will have a netiquette to ensure it is a safe environment for everyone to work in, free from discrimination. Staff will engage and monitor any behaviour which goes against the netiquette.
